

Quiz-1

Draw a flowchart of a program that takes the total balance as input from the user. Then, the user enters the amount of money he wants to withdraw from the ATM. If the amount is less than 0, then print "Invalid Input." However, if the withdrawal amount is greater than the balance, then print "Insufficient Fund." Lastly, if the amount is greater than zero and less than the balance, print "Withdraw successful" and the remaining balance.

Draw a flowchart of a program that takes the total number of available tickets as input from the user. Then, the user enters the number of tickets they want to purchase. If the number of requested tickets is less than or equal to 0, then print "Invalid Request." However, if the requested number of tickets is more than the available tickets, then print "Not Enough Tickets Available." Lastly, if the requested number is greater than 0 and less than or equal to the available tickets, print "Purchase Successful" and the number of tickets remaining.

Quiz-2

Problem: Write a Java program that takes one integer as input and adds their digits. First with Last, Second with second last, and so on. Print each result as you go.

Sample Input	Sample Output
123456	7 7 7
Explanation: $1+6=7$, $2+5=7$, $3+4=7$	
98716731	10 11 14 7
Explanation: $9+1=10$, $8+3=11$, $7+7=14$, $1+6=7$	

Quiz - 3

Illustrate the outputs of the following statements.

```
public class setA {  
    public static void main(String[] args) {  
        int j = 10;  
        int x = 2, y = 2, z = 6;  
        while (j > 0) {  
            y = 4 / x % 3 + z * y - 5;  
            if (4 + x % 3 > 5) {  
                x = y + (z--) + z;  
                System.out.println(x);  
            }  
            if (4 - x % 3 < 5) {  
                y = x + (--z) + y;  
                System.out.println(y);  
            }  
            y /= 10;  
            x++;  
            j--;  
        }  
    }  
}
```

Quiz-4 Question

Write a Java program that takes a word as input and checks whether it is a valid word or not...A word is only valid if it contains characters from A-Z or a-z..If the word is valid, it counts how many uppercase, lowercase, and vowels the word has.

Sample Input 1:

Astronomy

Sample Output 1:

Uppercases: 1

Lowercases: 8

Vowels: 3

Explanation 1:

The word "Astronomy" has one uppercase letter "A". The rest of the letters are in lowercase.

It has three vowels (A, o, and o).

Sample Input 2 : RedRoom21

Sample Output 2 : Invalid Word

Explanation 2 :

The word "RedRoom21" has characters in it that are not from A-Z or a-z..

Therefore, the program prints "Invalid Word"...

Quiz-5 Question

```
public class Quiz5A {  
    public static void main(String[] args) {  
        System.out.println("Exam Starts");  
        mA(12, 31);  
        System.out.println("Exam Ends");  
    }  
  
    public static void mA(int a, int b) {  
        if (a > b) {  
            System.out.println((a - b) * 3);  
        }  
        else if (a % 2 == 1) {  
            mA(a + 4, b);  
            System.out.println((a + b + 2) * 3);  
        }  
        else {  
            mA(a, b - 3);  
            System.out.println((b - 1) * 3);  
        }  
    }  
}
```
