Question 1 [10 Points]

Write a Java program that takes a string input from the user. The program should extract the numbers from the input string. Then prints the extracted number and the sum of the digits which are in even indices of the extracted number.

[You are only allowed to use `charAt()`, `codePointAt()`, `length()` string methods.]

Sample Input	Sample Output	Explanation
CSE427 Lec-18	Numbers: 42718 Sum: 19	In this input string, the numeric characters are 42718 which is the extracted number. Sum of digits in the even indices: $4+7+8 = 19$
63, Badda, Dhaka 1212	Numbers: 631212 Sum: 8	Here, the numeric characters are 631212 which is the extracted number. Sum of digits in the even indices: $6+1+1 = 8$
